

Session Prompts

COT:

Outline the key steps to create a go-to-market strategy for our new AI-powered financial analysis SaaS product. Think step by step, covering market research, target audience, pricing, and launch plan.

TOT:

You are a GTM strategist. Propose three distinct strategic approaches: a product-led growth (PLG) model, a direct enterprise sales model, and a channel partnership model. For each, evaluate its pros and cons. Based on your evaluation, decide which single strategy is most promising and explain why.

GOT:

You are a GTM strategist. Your goal is to determine the optimal go-to-market strategy for a new AI-powered financial analysis SaaS product using a Graph of Thoughts reasoning process.

1. ****Generate Initial Thoughts:**** Propose three distinct strategic approaches: a product-led growth (PLG) model, a direct enterprise sales model, and a channel partnership model. For each, evaluate its potential pros and cons.

2. ****Synthesize and Merge:**** Now, combine the strengths of the PLG and direct enterprise sales models. Create a new, hybrid strategy that uses PLG to acquire initial users or teams within a company and then uses enterprise sales to expand the account company-wide. Describe this hybrid model and its unique advantages.

3. ****Final Evaluation and Decision:**** Considering all the strategies you've generated (the original PLG, enterprise, and channel models, plus the new hybrid model), which single strategy is the most promising to pursue and why? Justify your final decision by comparing the options.

Grounding Technique 1:

Before asking "Can our company expand into Germany?", you would first prompt: "Generate 5 key facts about the regulatory environment for SaaS companies in Germany." You then feed these facts back into the next prompt as context.

Perspective 1 SIMTOM:

Stage 1 (Perspective-Taking): "A customer sees an ad for our SaaS at \$120/month. They go through checkout, where the annual plan is pre-selected. They complete the purchase and receive a receipt for \$1,200. What does the customer know and believe?"

Stage 2 (Question-Answering): "From the customer's perspective, why are they upset?"

Perspective 2 ICL

You are a strategic planning agent. Your task is to develop go-to-market (GTM) strategies for new AI SaaS products. You learn from your past successful projects.

Below is the successful trajectory from a previous project, "DataScribe AI," a tool for automating financial reporting. Use this as your in-context example to guide your reasoning for the new task.

--- ### SUCCESSFUL TRAJECTORY: GTM Strategy for DataScribe AI ###

1. ****Initial Goal:**** Launch DataScribe AI and acquire 100 paying customers in 6 months. 2. ****Action: Niche Identification:**** Focused exclusively on mid-sized accounting firms (50-200 employees) who were underserved by enterprise solutions. 3. ****Action: Beta Program:**** Ran a closed beta with 20 target firms. Gathered feedback on key features and identified the most valuable use case: automating quarterly compliance reports. 4. ****Action: Pricing Model:**** Based on beta feedback, implemented a three-tiered pricing model based on the number of reports generated, not per-seat, which aligned value with cost. 5. ****Action: Content Marketing:**** Launched a blog series titled "The Automation Advantage," featuring case studies from beta testers. This became the primary lead generation channel. 6. ****Action: Launch:**** Executed a targeted launch via LinkedIn ads and guest posts on accounting industry blogs. 7. ****Outcome:**** Achieved 150 paying customers in 5 months. The focus on a specific niche and value-based pricing were key to success. ---

NEW TASK

Now, develop a GTM strategy for a new product: "RiskRader AI," a tool that provides predictive risk analysis for investment portfolios.

Following the structure and principles from the successful DataScribe AI trajectory, outline the GTM strategy for RiskRader AI. Your output should be a sequence of recommended actions covering niche identification, a pilot/beta program, pricing, and key marketing channels.

Verification

1. The Base Prompt

This is the initial, simple instruction given to the LLM to generate the first draft.

Prompt: "Write a short, punchy marketing email for our new AI SaaS product, 'Financier Pro.' Mention that it outperforms competitors and is used by top firms."

2. The Reference Material (Initial Draft)

This is the output from the base prompt. It contains both subjective weaknesses and factual claims that we will address with the two different techniques.

Initial Draft:

Subject: Revolutionize Your Financial Analysis with Financier Pro

Our new AI SaaS product, 'Financier Pro,' outperforms Competitor X by 50% and is used by top firms like Goldman Sachs and JP Morgan. It has many features that will help you. You should buy it now to improve your financial analysis.

Self-Refine: Improving Subjective Quality

The goal here is to use the LLM's ability to critique and improve its own writing style. The process is a loop of feedback and refinement.

Actual Prompts for Self-Refine:

Step 1: The Feedback Prompt This prompt asks the model to act as a critic of its own work, focusing on subjective qualities.

Prompt: "You are a marketing expert. Review the following email draft and provide feedback on its tone, persuasiveness, and specificity. Is the language compelling for senior financial analysts? Does it clearly state the benefits instead of just listing features?"

...

Step 2: The Refinement Prompt This prompt instructs the model to use the feedback it just generated to rewrite the email.

Prompt: "Excellent feedback. Now, incorporate the points you just made to rewrite the email. Make it more persuasive, adopt a professional and confident tone, and highlight specific, tangible benefits for the target audience."

Chain of Verification (CoVe): Ensuring Factual Accuracy

The goal here is to use a structured, multi-step process to fact-check the claims made in the initial draft and reduce the risk of hallucinations.

Actual Prompts for Chain of Verification:

Step 1: The "Plan Verifications" Prompt This prompt asks the model to break down the draft's claims into a series of specific, answerable questions.

Prompt: "Given the following marketing email draft, generate a list of verification questions to fact-check the specific claims made within it."

❖

Step 2: The "Execute Verifications" Prompt This is the most critical step. The model is prompted to answer each question independently to avoid being biased by the original draft's narrative.

Prompt: "Answer each of the following verification questions independently and factually. Do not use the context of the original email draft.

1. What is the data source for the claim that 'Financier Pro' outperforms Competitor X by 50%?
2. Is Goldman Sachs a publicly confirmed client of 'Financier Pro'? 3. Is JP Morgan a publicly confirmed client of 'Financier Pro'?"

(For the demo, you would assume the model's answers are: 1. "Internal benchmark data, not publicly released." 2. "No public confirmation." 3. "No public confirmation.")

Step 3: The "Generate Final Response" Prompt This prompt provides the original draft and the verified facts, instructing the model to write a final version that is factually accurate.

Prompt: "You have the following original email draft and a set of verified facts. Revise the email to be factually accurate based ONLY on the verified information. Remove or rephrase any claims that could not be verified.

****Original Draft:**** ``

****Verified Facts:**** - The 50% performance claim is based on internal, non-public data. - Goldman Sachs is not a publicly confirmed client. - JP Morgan is not a publicly confirmed client.

****Revised Email:****"

Bonus

CO-STAR Framework - Project Recovery

CONTEXT # A large corporate transformation project has been running for 18 months and is now 40% over budget and 6 months behind schedule. The project involves implementing new operational processes across 5 departments with 200+ employees affected. Stakeholder confidence is declining, team morale is low, and the board is considering whether to continue or terminate the project.

OBJECTIVE # Develop a comprehensive project recovery plan that identifies:

1. Root causes of current project issues
2. Viable recovery strategies with risk assessment
3. Revised timeline and budget scenarios
4. Stakeholder re-engagement approach
5. Quick wins to rebuild confidence

STYLE # Write as an experienced project recovery specialist with expertise in large-scale organizational transformations and crisis management.

TONE # Professional and solutions-focused, balancing honesty about challenges with optimism about recovery possibilities.

AUDIENCE # Board of directors, C-suite executives, and senior stakeholders who will decide the project's future.

RESPONSE # A structured recovery assessment report that includes:

- Executive Summary
- Current State Analysis
- Root Cause Assessment
- Recovery Options & Recommendations
- Revised Project Plan
- Risk Mitigation Strategies
- 90-Day Action Plan
- Success Criteria & Checkpoints
- Go/No-Go Decision Framework
